Education

University of Western Ontario
Bachelor of Science - Computer Science

Graduated: June 2026
London, ON

Experience

Automation Developer Intern

May 2025 - Aug 2025

General Dynamics Land Systems

London, ON

- Collaborated with Supply Chain Management, HR, and Operations to understand workflow pain points and develop technical solutions.
- Built Python automations to automate part identification, report generation, and email communications reducing manual workload by 10 hours per week.
- Designed and implemented SQL schemas to consolidate inconsistent Excel spreadsheets, improving data accuracy and accessibility.

Software Developer Intern

May 2024 - Dec 2024

Goodself

Toronto, ON (Remote)

- Built reusable React components with TypeScript, HTML, and CSS to support responsive design, web accessibility, and consistent design systems.
- Implemented TypeScript event tracking across 13 web pages and used Mixpanel and Firebase Analytics to analyze application usage and user behaviour.
- Conducted unit, end-to-end and UAT testing across development, staging, and production environments reducing production level bugs.

Software Engineer Intern

Jan 2024 - Apr 2024

FimiMall

Milton, ON (Remote)

- Used Docker to run a Spring Boot API and MongoDB environment, integrating Java search queries to improve relevant search results.
- Used Postman to test REST API endpoints and validate HTTP requests, improving integration reliability.
- Optimized search data using MongoDB, Studio 3T, and Elasticsearch, reducing response times and improving data retrieval.

Projects

CLI Router for LLMs

Technology used: Python, Typer, Laya, LLM API's (Claude, ChatGPT, etc), PyYAML, PyTorch, Transformers

- Built a command-line AI router that classifies questions and routes requests to the appropriate model.
- Designed failure-based escalation (rate limits, timeouts, authentication errors, or outages).
- Built a configurable registry supporting model, tier, endpoint, and API key configuration.

Interactive Digital Art Gallery

Technology used: React, TypeScript, HTML, CSS, Python, FastAPI, Pydantic, PostgreSQL, SQLAlchemy, Cloudflare, Git

- Worked with local artists to design, and build an interactive 3D interface using React, TypeScript, and Three.js.
- Designed SQLAlchemy relational models and Pydantic schemas for management, validation, and data handling.
- Designed a PostgreSQL database for storing artwork, user accounts, and artist information.

Western University Assignment Autograder (Capstone Project)

Technology used: Python, HTML, CSS, Jinja, uv, pytest, Pydantic, KDL (Kernel Document Language), Git

- Worked directly with a supervising professor to translate functional and non-functional requirements into software components and adapted the design as requirements changed throughout development.
- Designed a KDL-based configuration system supporting reusable test cases and multiple assignment formats.
- Rendered reports with expected vs. actual output comparisons and exception handling using Jinja and HTML/CSS

Skills

- **Languages:** Java, Python, JavaScript, TypeScript, SQL
- **Frameworks & Libraries:** React, Vite, Next.js, Node.js, Spring Boot
- **APIs & Web:** REST APIs, HTML, CSS, JSON
- **DevOps & Tools:** Git, GitHub Actions, CI/CD, Docker, Vercel, Firebase
- **Databases:** PostgreSQL, MySQL, SQLite, MongoDB
